Door-to-door Waste Collection Pilot Project - GUIDELINES

To enhance our approach to domestic waste management, the LWMA is launching a pilot door-to-door waste collection program in three districts: Au Cap (Turtle Bay), Baie Lazare (Anse a la Mouche), and Perseverance 1 (semi-detached houses only). We kindly ask for your active participation in ensuring the success of this initiative. Please adhere to the guidelines and requirements associated with this new collection method as outlined.
Your cooperation is greatly appreciated.

What are the waste accepted for collection?

Any waste typically produced by a family in a residence on a **DAILY** basis.

Wondering what to do with your recyclable waste?

Collect your beverage PET bottles, cans, and alcoholic glass bottles in a separate bag and then:

- Donate them to someone who collects them,
- Set them aside **at your bin** or any bin site, or
- Return them to redeem centers.

Think about transforming your organic waste into home-made natural fertilizer for your plants!

What type of waste is NOT accepted for collection?

Commercial Waste (any waste resulting from a commercial activity), **but also**:

Learn more about the disposal of Bulky, Green and Scrap Metal waste at the bin sites.

SCAN ME to know the **collection days** in your district!

Be Careful! If you don't comply, your bin risks to not be collected by our waste contractor and the disposal of its content will be your responsibility.

When will your bin be collected?

Monday & Thursday early morning

Suggestion: Enhance the look of your bin by enclosing it in a stylish shelter!

Door-to-door Waste Collection Guidelines

Before Collection:

- Ensure the cleanliness of the bin.
- Keep your bin in good physical condition. Conduct regular inspections to assess bins and report any damage to the LWMA hotline. 282 2600.

If bins are in poor conditions, emptying them will be difficult for contractors.

- Ensure that your bin identification number is present and visible on your bin at all times.
- Practice responsible consumption and minimise waste generation.
- If you don't practice compost, freeze your organic waste (e.g., food waste, fish remains, etc.) until the collection days to avoid foul odours and pests/rodents in your bin.

- Place your daily waste in a bin bag and/or any other appropriate closed bag before "final disposal" in your 110-litre bin. *Do not loosely dispose of waste within the bin.*

"During" Collection:

- Ensure your bin is available for collection in accordance with the schedule. It is advised to place your bin outside the evening before collection.
- Ensure timely placement of the bin at allocated areas for collection. (not obstructing pathways, visible enough for waste contractors…)
- Refrain from overloading the bin and ensure that the bin is able to be closed and lid secured to minimise pests and rodents.

After Collection:

- Ensure that the bin is placed back onto premises/in your backyard.
